

Analysis of Post-Disaster Planning using Delay from a Travel Demand Model and Taking Commercial Vehicles into Account

Dr. Mehrnaz Doustmohammadi and Dr. Michael Anderson
Department of Civil and Environmental Engineering
The University of Alabama in Huntsville

2019 I-NUF: International – Urban Freight Conference
Long Beach, CA

Transportation Network Resiliency

- ▶ U.S. National Infrastructure Advisory Council defined infrastructure resilience as “the ability to reduce the magnitude and/or duration of disruptive events.”
 - NIAC. Critical Infrastructure Resilience. Department of Homeland Security, 2009.

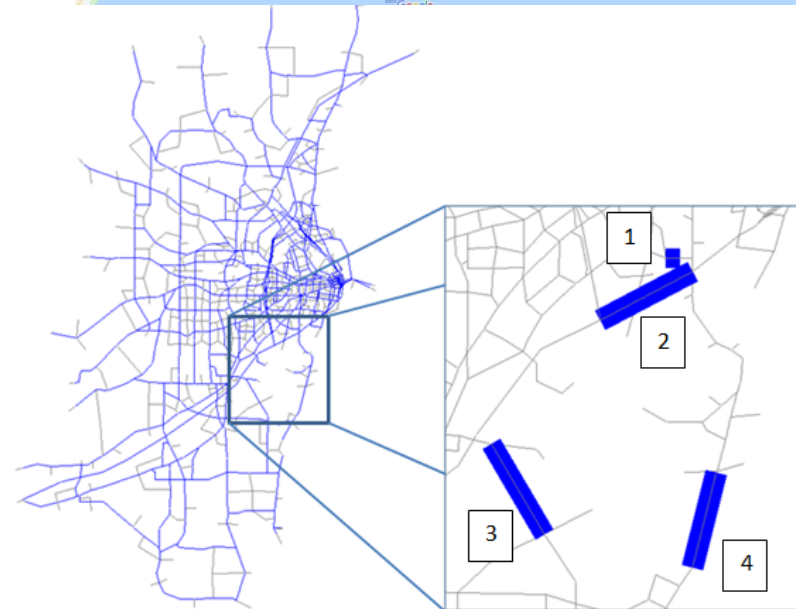

- Bruneau, M., S. E. Chang, R. T. Eguchi, G. C. Lee, T. D. O'Rourke, A. M. Reinhorn, M. Shinozuka, K. Tierney, W. A. Wallace, and D. von Winterfeldt. A framework to quantitatively assess and enhance the seismic resilience of communities. *Earthquake spectra*, Vol. 19, No. 4, 2003, pp. 733–752.

Question

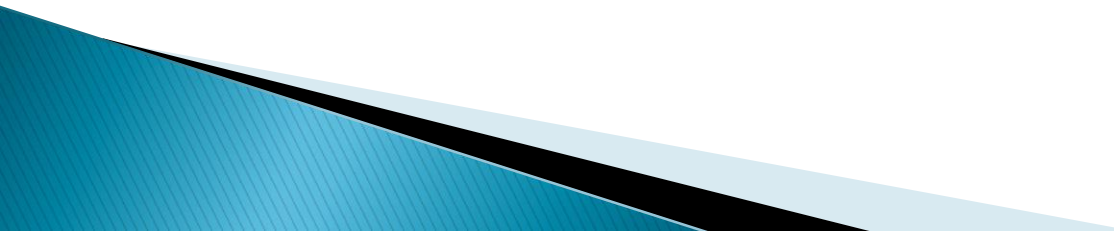

- ▶ Can we use travel delay to optimize bridge repair schedule, including freight concerns?
- ▶ Two replacement scenarios
 - Equal Repair Times
 - Different Repair Times
- ▶ Assumptions of the methodology ...
 - 1) Only one bridge can be repaired at a time.
 - 2) All destinations are constant.
 - 3) Cost is not one of the constraints.

Case Study: Mobile, AL

- ▶ Hurricane impacts the Dog River
- ▶ Four Bridges
 - 1. McVay Drive
 - 13,000 vehicles per day
 - 2. Interstate 10
 - 80,000 vehicles per day,
 - 3. AL Highway 193
 - 20,000 vehicles per day, and
 - 4. AL Highway 163
 - 4,000 vehicles per day.

Modeling Design

- ▶ Travel Time on impacted bridges set to 9,999 minutes.
 - ▶ Assigned independent trip tables
 - Commercial Vehicles
 - Passenger Cars
 - ▶ Assigned such that commercial vehicles have initial preference
- 

Modeling Design (Continued)

- ▶ Delay is a function of volume/capacity ratio

- $TT_i = TT_0 * \left(1 + a * \left(\frac{V}{C}\right)^b\right)$

- ▶ Cost of time

- Passenger Car = \$17.67/hour

- Commercial Vehicle = \$94.04/hour

- 2015 Urban Mobility Scorecard Methodology, <http://mobility.tamu.edu/ums/congestion-data/>

- ▶ Community Delay

- Community Delay = $\sum \{[\text{Travel time (new)} - \text{Travel time (original)}] * \text{roadway volume}\}$

16 Modeling Combinations

| Combination | Bridges Removed |
|-----------------------|------------------------|
| All Bridges Present | None |
| One Bridge Removed | 1 |
| | 2 |
| | 3 |
| | 4 |
| Two Bridges Removed | 1 and 2 |
| | 1 and 3 |
| | 1 and 4 |
| | 2 and 3 |
| | 2 and 4 |
| | 3 and 4 |
| Three Bridges Removed | 1 and 2 and 3 |
| | 1 and 2 and 4 |
| | 1 and 3 and 4 |
| | 2 and 3 and 4 |
| All Bridges Removed | 1 and 2 and 3 and 4 |

Delay Costs

| Scenario | Delay Costs (\$) | Increase in Delay Costs (\$) |
|-----------------------|-------------------------|-------------------------------------|
| None – Base Condition | 384,981.63 | - |
| 1 | 390,248.46 | 5,266.83 |
| 2 | 565,496.84 | 180,515.21 |
| 3 | 400,805.31 | 15,823.67 |
| 4 | 390,469.28 | 5,487.64 |
| 1 and 2 | 573,581.65 | 188,600.01 |
| 1 and 3 | 406,958.95 | 21,977.32 |
| 1 and 4 | 396,091.98 | 11,110.35 |
| 2 and 3 | 588,064.05 | 203,082.42 |
| 2 and 4 | 675,387.66 | 290,406.03 |
| 3 and 4 | 428,024.49 | 43,042.86 |
| 1 and 2 and 3 | 605,852.34 | 220,870.71 |
| 1 and 2 and 4 | 673,115.40 | 288,133.77 |
| 1 and 3 and 4 | 433,580.78 | 48,599.15 |
| 2 and 3 and 4 | 695,176.53 | 310,194.90 |
| 1 and 2 and 3 and 4 | 708,173.68 | 323,192.05 |

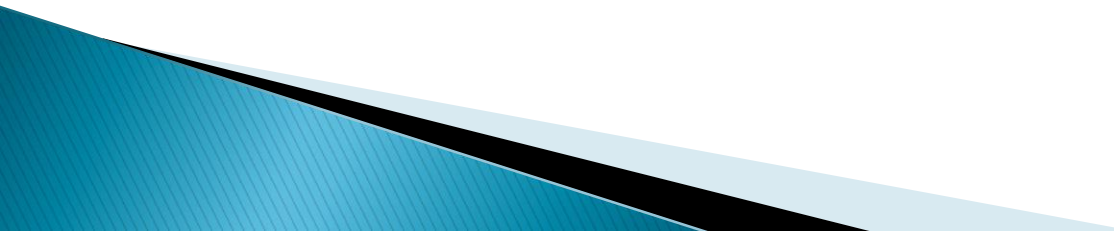

Repair Schedules

| Repair Scenario | 1 | 2 | 3 | 4 | 5 | 6 |
|-----------------|---|---|---|---|---|---|
| First | 1 | 1 | 1 | 1 | 1 | 1 |
| Second | 2 | 2 | 3 | 3 | 4 | 4 |
| Third | 3 | 4 | 2 | 4 | 2 | 3 |
| Fourth | 4 | 3 | 4 | 2 | 3 | 2 |

- ▶ All possible combinations
- ▶ 24 Bridge repair options

Two Repair Scenarios

- ▶ All bridges take the same time to repair
 - Each bridge takes 60 days

 - ▶ Different bridge repair times
 - Bridge 1 – 120 days
 - Bridge 2 – 60 days
 - Bridge 3 – 40 days
 - Bridge 4 – 20 days.
- 

Cost Comparison – Same Repair Time

| Repair Schedule | Total Delay Costs In Million Dollars | Repair Schedule | Total Delay Costs In Million Dollars |
|-----------------|---|-----------------|---|
| 1-2-3-4 | 40.92 | 3-1-2-4 | 54.54 |
| 1-2-4-3 | 41.54 | 3-1-4-2 | 64.93 |
| 1-3-2-4 | 55.76 | 3-2-1-4 | 37.68 |
| 1-3-4-2 | 66.26 | 3-2-4-1 | 37.66 |
| 1-4-2-3 | 51.14 | 3-4-1-2 | 58.83 |
| 1-4-3-2 | 61.02 | 3-4-2-1 | 48.31 |
| 2-1-3-4 | 25.22 | 4-1-3-2 | 55.66 |
| 2-1-4-3 | 25.84 | 4-1-2-3 | 45.78 |
| 2-3-1-4 | 23.30 | 4-3-1-2 | 54.79 |
| 2-3-4-1 | 23.39 | 4-3-2-1 | 44.28 |
| 2-4-1-3 | 24.58 | 4-2-1-3 | 34.91 |
| 2-4-3-1 | 23.94 | 4-2-3-1 | 34.28 |

Cost Comparison – Same Repair Time

Total Delay Cost in Millions of Dollars

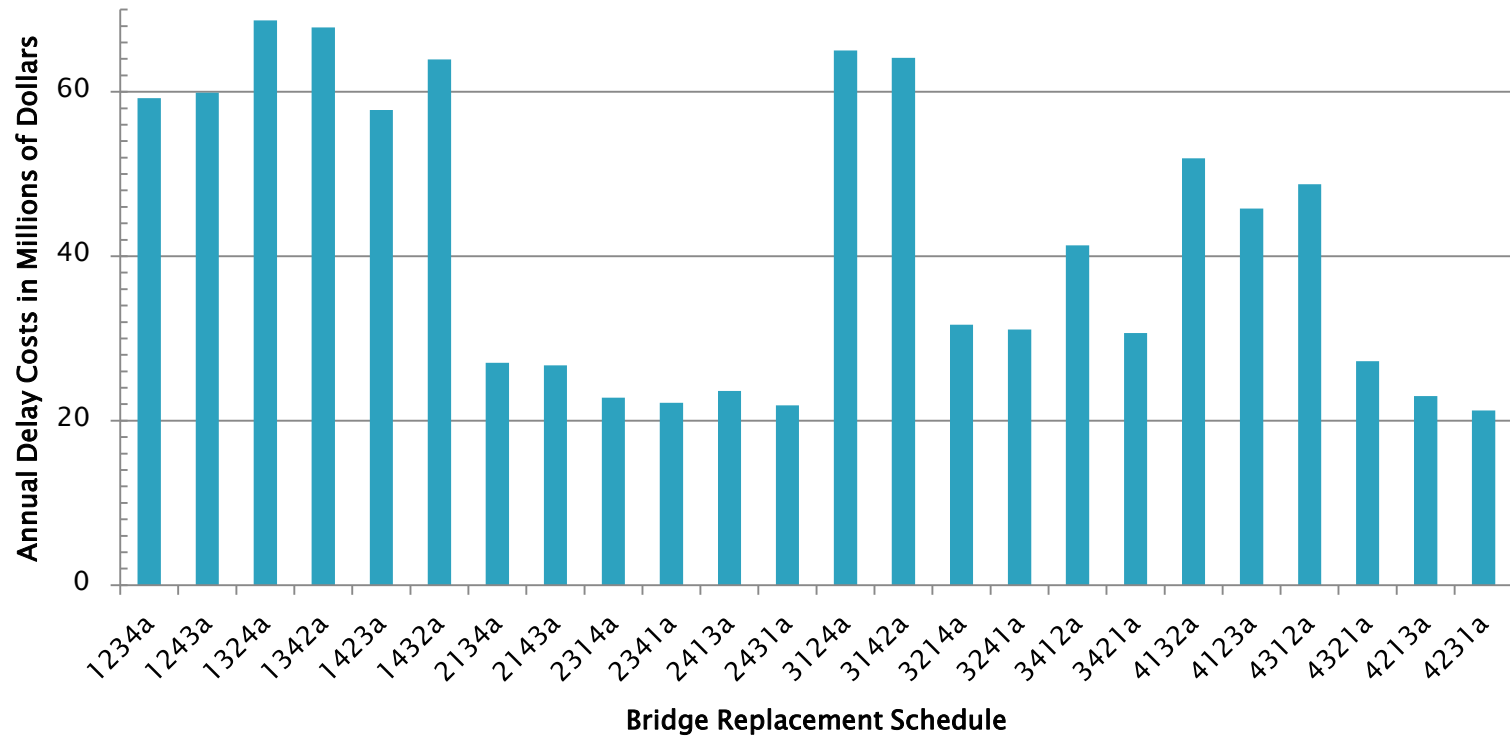

Cost Comparison – Different Repair Times

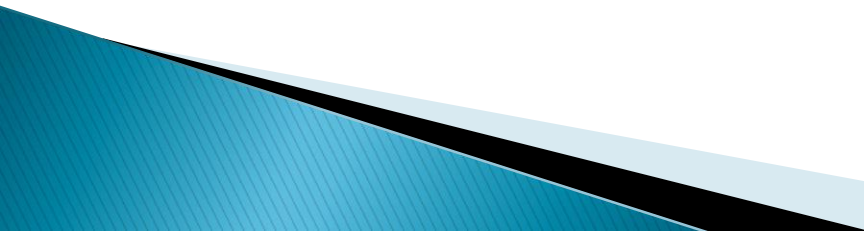

| Repair Schedule | Total Delay Costs In Million Dollars | Repair Schedule | Total Delay Costs In Million Dollars |
|-----------------|---|-----------------|---|
| 1-2-3-4 | 59.23 | 3-1-2-4 | 65.04 |
| 1-2-4-3 | 59.89 | 3-1-4-2 | 64.14 |
| 1-3-2-4 | 68.67 | 3-2-1-4 | 31.66 |
| 1-3-4-2 | 67.83 | 3-2-4-1 | 31.07 |
| 1-4-2-3 | 57.8 | 3-4-1-2 | 41.32 |
| 1-4-3-2 | 63.94 | 3-4-2-1 | 31.64 |
| 2-1-3-4 | 27.05 | 4-1-3-2 | 51.92 |
| 2-1-4-3 | 26.72 | 4-1-2-3 | 45.79 |
| 2-3-1-4 | 22.78 | 4-3-1-2 | 48.76 |
| 2-3-4-1 | 22.19 | 4-3-2-1 | 27.25 |
| 2-4-1-3 | 23.62 | 4-2-1-3 | 22.99 |
| 2-4-3-1 | 21.87 | 4-2-3-1 | 21.23 |

Cost Comparison – Different Repair Times

Delay Cost in Millions of Dollars

Conclusions

- ▶ Resiliency analysis using delay
 - ▶ Different repair schedules – same repair time
 - 2-3-4-1 using constant value of time
 - 2-3-1-4 using weighted freight value of time
 - ▶ Methodology is transferable to other locations/disaster scenarios
 - ▶ Commercial vehicles must be considered separately
- 

Thank You
