Port of Long Beach Harbor Tour !

The Port of Long Beach Environmental Planning, Master Planning, and Transportation Planning Divisions are hosting a Harbor Cruise of the Port. Port staff will be available on the boat to provide narration and to answer questions about Port projects. The tour will enable you to get close to Port operations, see infrastructure projects **such as the Gerald Desmond Bridge Replacement and the electrified and automated Middle Harbor terminal, and possibly even catch a glimpse of local marine life.** We will also discuss the variety of groundbreaking green programs the Port has implemented to reduce the environmental impacts from port-related operations.

Limited spots !
RSVP NOW !

METRANS is dedicated to solving metropolitan and transportation problems through research, education, and outreach.
